Week 6 Milestones

1. Created API - please note that the last request in my API is incorrect and needs updating. As such, I have not created documentation from that part and I will be updating that as soon as possible.
2. Created API Documentation, as mentioned prior, there is some documentation missing as I discovered that I created the last request incorrectly. This is located in the documents directory in my repo.
3. Updated UML chart. Saved as a PDF in the documents directory in my repo.
4. Updated Use case, also located in the documents directory in my repo.

Repo is located at: https://github.com/rofljen/ling_508_project
